

- neurofilament bundle assembly
- Transmission across Chemical Synapses
- regulation of membrane potential
- regulation of sodium ion transmembrane transporter ;
- regulation of neuron projection development
- regulation of postsynaptic membrane potential
- adult behavior
- response to inorganic substance
- SLC-mediated transmembrane transport
- Protein digestion and absorption
- Neurotransmitter release cycle
- regulation of peptidyl-threonine phosphorylation
- regulation of neuron apoptotic process
- regulation of neural precursor cell proliferation
- localization within membrane
- platelet-derived growth factor receptor signaling path
- Breast cancer
- inorganic anion transmembrane transport
- regulation of cell shape
- regulation of synaptic transmission, glutamatergic
